

STEVEN GALOVICH MEMORIAL STUDENT SYMPOSIUM

Monday, April 4, 2011

OPENING EVENTS

**SONNENSCHNEIN, ALBRIGHT, AND DEERPATH ART GALLERIES
DURAND ART INSTITUTE AND DEERPATH HALL**

Moderator: Tracy Marie Taylor

4:00-6:00 Student Art Exhibit with Gallery Talks and Reception
(See list of student artists at end of program.)

Moderator: Gizella Meneses

5:00-6:00 *Collage Readings – DURAND 208*

Creative writing from the modern languages in a rich variety of styles and genres

Tuesday, April 5

DONNELLEY AND LEE LIBRARY, FIRST FLOOR LOBBY

9:30-3:00 Welcome Center

ORAL PRESENTATIONS

DONNELLEY AND LEE LIBRARY 203

Morning Session - 10:00-12:10

Panel 1 **The State of States**

Moderator: Siobhan Moroney

10:00-10:20 Fabricio Sordoni
China's Soft Power in Latin America: Implication for the Western Hemisphere

10:20-10:40 Ioana Sirca Belintan
The Development of Civil Society in Post-Communist Romania

10:40-11:00 Collin Lever
Islam and the State: Function Rather than Feature

Panel 2 **Jamaica and French**

Moderator: Amanda Felkey

- 11:10-11:30 Erin McGinley
Love or Money: Who Owns Falmouth, Jamaica?
- 11:30-11:50 Tasheka Aikman
Why Has Jamaica Failed to Achieve Sustainable Growth? An Empirical Study Measuring the Impact of Various Socio-Economic Factors in a Developing Nation
- 11:50-12:10 Annalise Parks
When the Tricolore Bleeds Over: The Appreciation for French Culture in Francophone Countries and Regions

Afternoon Session – 1:00-3:10

Panel 3 Games, Music, Behavior

Moderator: Robert Lemke

- 1:00-1:40 Elise Beckman
Robin Cai
Rebecca Esrock
Explaining Game-to-Game Ticket Sales for Major League Baseball Games over Time

- 1:40-2:00 Aimee Lockwood
Sports and Academics: The Effects of Delayed Gratification

- 2:00-2:20 Libby Wait
"I'm in a New York state of mind": The Role of Place in Hip-Hop Music

Panel 4 Parlez-vous Français? The Translation of French Literature

Moderator: Cynthia Hahn

- 2:40-3:10 Emma Jo Chalverus
Jeanne Engelkemeir
Fabricio Sordoni
Translating "Women of the Twilight": Reading and Discussion

DONNELLEY AND LEE LIBRARY 205

Morning Session – 10:00-11:20

Panel 5 Free Will, Language, Action

Moderator: Janet McCracken

- 10:00-10:20 Karla I. Avila-Peregrina
Is Free Will An Illusion?
- 10:20-10:40 Rachiny Samek
Asian Americans and Affirmative Action: the Need for a Reevaluation of Affirmative-Action Policies

10:40-11:00 Thomas Bark
Does the Language We Speak Shape the Way We Think?

11:00-11:20 Paul Henne
Fictional Discourse and Fictitious Entities

Afternoon Session – 1:00-3:20

Panel 6 Presidential Power

Moderator: William Divane

1:00-1:20 Alexis Czarnecki
Soothing the Fighting Irish: Barack Obama's 2009 Commencement Address at the University of Notre Dame

1:20-1:40 Katie Howson
Executive Power and the Courts

1:40-2:10 Sarah Brune
Yushin Kohara
Barack Obama and Open Government

Panel 7 All History is Local

Moderator: Steve Schutt

2:20-2:40 Syndhia Javier
Lake Forest's Black History: A Glimpse into the Past

2:40-3:00 Jennifer Lindblom
Howard Van Doren Shaw's Ragdale: Preserving American Arts and Crafts

3:00-3:20 Courtney King
African-American Influence in Lake Forest

DONNELLEY AND LEE LIBRARY 221

Morning Session - 10:00-12:00

Panel 8 Composition Collaboration

Moderator: Emilie Amrein

10:00-10:20 Mariana Garciagodoy
Emily Hilgenberg
Karen Larson
Dreamweaver, Sing: Celebrating the Marriage of Music and Text

Panel 9 Perspectives on Gender

Moderator: Lisa Hinckley

- 10:30-10:50 Cleo Hehn
The Fallen Woman and the Fall of Society
- 10:50-11:20 Kaitlyn Martin
Farzeen Tariq
Portfolios of the Poor: Macro and Micro Empowerment of Women
- 11:20-11:40 Katie McClain
Semper Gumby: A Memoir of a Military Girlfriend
- 11:40-12:00 Karen Larson
H/e/a/r/e

Afternoon Session – 1:00-3:10

Panel 10 Culture and Society in Latin America

Moderator: Ann Roberts

- 1:00-1:20 Laura Frye
Writing a Trilingual Children's Book in the Bolivian Highlands
- 1:20-1:40 Eemeli Isoaho
From the Margin to Mainstream: Empowerment of Bolivian Indigenous Groups During the Government of Evo Morales
- 1:40-2:00 Karen Larson
The So-Called Collapse of the Maya Civilization

Panel 11 Policy and Perception

Moderator: Chad McCracken

- 2:10-2:30 Sara White
Smart US Foreign Policy: Regaining International Credibility
- 2:30-2:50 Andrew Van Herik
What's Wrong With Torture?
- 2:50-3:10 Jennifer Kurtz
Nationalism in the Media: Perspectives of the 2010 BP Oil Spill in the US and UK media

JOHNSON 100

10:00-12:00

Physics Demonstration

Moderator: Michael Kash

- 10:00-11:00 David Curie
Hussein Daraghma

Huy Hoang
Kosova Kreka
Michaelangelo Monterroso
Matthew Morrison
Lauren Swafford
Stamen Tintikov
The Wonders of Light

Panel 12 Collisions and Resonance

Moderator: Michael Kash

11:20-11:40 David Curie
Electron Molecule Collisions

11:40-12:00 Lauren Swafford
Pulsed NMR

JOHNSON 215

11:00-12:00

Biology Demonstration

Moderator: Shubhik DebBurman

Cannabinoid Receptor Activation during Adolescence Prevents Inhibitory Interneuron Development in the Prefrontal Cortex

Recent findings indicate that cannabis (marijuana) use during adolescence is associated with an increased risk for schizophrenia. Decreased levels of GABA interneurons have been observed in the prefrontal cortex of schizophrenic patients. These GABA interneurons express the protein parvalbumin (PV). Hypothetically the activation of the endocannabinoid receptor CB1 during adolescence could alter the developmental maturation of these GABA interneurons. Repeated administration of an CB1 agonist, WIN, on interneuron function during adolescence, but not during adulthood, specifically prevented the normal developmental enhancement of prefrontal PV-immunoreactivity. This developmental disruption may contribute to an increased risk for psychiatric disorder. This research was performed in Dr. Kuei-Yuan Tseng's Laboratory at Rosalind Franklin University of Medicine and Science.

Why has Jamaica Failed to Achieve Sustainable Growth? An Empirical Study Measuring the Impact of Various Socio-Economic Factors in a Developing Nation

Jamaica, a small island with a population of 2,825,928 people, has the third largest murder rate per capita in the world and is classified as a developing nation. These high crime rates, along with the country's poverty, are contributing factors that inhibit the country from achieving positive economic growth. The purpose of this study is to determine what role debt, crime, climate and natural disasters play in Jamaica's inability to achieve sustainable growth. There has been little work done on Jamaican economic growth, and this paper aims to fill that void.

Is Free Will An Illusion?

The possibility of free will is one of the most contested philosophical issues and has gained much popularity in academic subjects outside of philosophy. However dubious it may seem I argue that free will is merely an illusion, albeit a necessary and useful illusion. Hard incompatibility posits that free will is incompatible with any notion of determinism or indeterminism, and furthermore, there is reason to believe that in scientific literature it is superfluous. Subsequent research explores the possibility that an illusion of free will is an evolved trait necessary for human social structure and therefore maintained.

Understanding Lake Forest College's Flow of Information

Two of Lake Forest College's main points of pride are its small size and the relationships and communication among students, faculty, and staff members created therein. But how well do we really communicate as a community? Despite the long-term shift at the College toward more inclusion of student voices in decision-making processes, students are still faced with a system that strongly favors top-down information flow. This presentation will highlight the research that led to two college-specific, sustainable ways to attempt to bridge the gaps in communication.

Mnemonic Effects of Humor in Speeches

People often suggest leading (or ending) with a joke to enhance speeches. If these suggestions are true, then using a joke should enhance memory compared to a non-joke situation. However, distinctive information sometimes negatively affects memory for immediately surrounding information because of distraction. This thesis project specifically investigated the effects of using a joke and the location of the joke within a speech. In Experiment 1, participants heard two passages; one began with a humorous limerick and the other with a non-humorous one. In Experiment 2, the limericks were presented at the end of the passages. Findings will be presented.

Does the Language We Speak Shape the Way We Think?

To what extent does the language we speak influence our thoughts and perceptions of the world around us? The discovery of languages such as Guugu Yimithirr reshaped the fundamental philosophy and psychology of linguistic analysis – for it and others like it showed that languages can exist perfectly fine without concepts that had previously been considered universal building blocks of spatial thought. In my paper I make a case for a casual relation between language and thought by showing that habits of speech – instilled from an early age – can create habits of mind that affect not just speech but orientation skills and even patterns of memory.

The Effects of Amphetamine on the Basolateral Amygdala and Prefrontal Cortex of Socially Isolated Lab Rats

Amphetamine is a recreational drug that elevates mood, whose abuse rate is higher among adolescents who experience inadequate social support or developmental disruption. We test the hypothesis that social perturbations during adolescence lead to enhanced responsiveness to amphetamine of the amygdala and the prefrontal cortex, a brain region interconnected with the amygdala, and associated with decision making and mood regulation. Preliminary results indicate that amphetamine may disrupt the connectivity between the prefrontal cortex and amygdala in socially isolated rats. Developmental disruptions, therefore, may increase susceptibility to impairments caused by amphetamine via disruption of cortico-amygdala systems.

Land Subsidence in Coastal Louisiana

Land loss in Coastal Louisiana threatens the Cajun way of life as well as a major port system, oil and natural gas infrastructure and thus the whole state. This report reviewed a number of sources including geological papers, first-person accounts, and statistical data. Subsidence in Louisiana is due to a natural predisposition to land loss because of its geological character, as well as the interaction of human industry and other activities in the region. The combination of these precarious circumstances has caused much devastation to Cajuns, oil and gas interests, and the country as a whole.

David Curie '13, Physics; Barrington, IL
Electron Molecule Collisions

When gas molecules emit energy they frequently do so in the form of light. Understanding the unique spectrum of light emitted by the excited molecules gives insight into the corresponding energy levels of the molecules. We compared room-temperature samples to cold samples of nitrogen gas ions. Cold samples are of special interest because they have reduced populations in the vibration and rotational energy levels. Specifically, we are trying to calculate the density of the gas in the cold molecular beam as a function of time and position, as well as measure the temperature of these super cooled gas molecules.

Soothing the Fighting Irish: Barack Obama's 2009 Commencement Address at the University of Notre Dame

President Barack Obama was invited to give the commencement address at the University of Notre Dame in May 2009. After his acceptance, protests broke out across the campus and in the surrounding city. Controversy surrounded the selection of a pro-choice speaker to give an address at a Catholic, pro-life school. Many people forgot the importance of having the nation's leader come and speak to the graduates amidst the surrounding chaos. By subjecting the speech to rhetorical analysis, this paper explores how Obama was able to connect with the graduates and the broader Catholic community. This analysis includes an exploration of ideology (Michael McGee's "ideograph"), context (Lloyd Bitzer's "rhetorical situation") and dramatic theory (Kenneth Burke's "pentad").

Sylwia Dakowicz, Biology
Searching for a Telomerase RNA Gene in Silico

I have been using bioinformatics to search the genomes of fungi such as *Aspergillus oryzae*, and *A. nidulans* for a telomerase RNA gene sequence. No such gene has been found in any filamentous fungi, yet this gene is essential for life as it provides the template for telomere synthesis. Our lab has been focusing on sequences found in *A. oryzae* since this organism has an unusually long 12 bp telomere sequence instead of the short 6 bp sequence found in humans and *A. nidulans*. These extra nucleotides enable 100-fold fewer sequences that we need to closely examine. Nonetheless, since we ultimately wish to identify a sequence in *A. nidulans*, the quest now is to find synteny.

Jonathan Flaksman, Biology

Identification of Dopaminergic Neuron Mutations in Worms with a Calcium Indicator

Dopamine is a major neurotransmitter found in animals that helps execute voluntary movement. In order to better understand this function, our lab uses a nematode worm as a model organism. We hypothesized that performing chemical mutagenesis on these worms will create new mutations that will increase calcium levels in dopaminergic neurons when compared to wild type (WT) worms. Fluorescence assays revealed eight such mutants that exhibited higher calcium activity. In the future, single nucleotide polymorphism mapping will be performed to identify mutated genes. This research was performed at Dr. Hongkyung Kim's Laboratory at Rosalind Franklin University of Medicine and Science.

Neurophysiological Dimensions of Adult Attachment

Attachment processes have been an important topic in the psychology of human development, ranging from studying infant attachment styles to understanding the ways in which attachment influences how adults are likely to act and react in relationships. My thesis studies the neurophysiological dimensions of adult attachment, adding to the small literature on this topic. The questions this thesis aims to answer revolve around the generalized and asymmetric aspects of brain wave response to emotion, and to the ways that adult attachment style may influence these responses. Participants' (29) brain waves were recorded while viewing both neutral-emotion and emotion-evoking video clips.

Writing a Trilingual Children's Book in the Bolivian Highlands

While studying in Cochabamba, Bolivia during the fall of 2010, I conducted a month-long independent research project that resulted in a children's book. I collaborated with Wilma, a young indigenous woman in the Universidad Mayor de San Simón, to write her true life's story. My book focuses on why she chose to get a higher education and why she has chosen to continue to wear her indigenous clothing, which is very uncommon in universities in Bolivia. It is written in Spanish, English, and Quechua, which is Wilma's native language. The illustrations are actual photographs of Wilma and her family.

*Diurnal Roosting Behavior Of The White Tent-making Bat *Ectophylla Alba* (Cilropetera: Phyllostomidae) In Costa Rica*

I aim to describe the behavior of white tent-making bats during their diurnal roosting period. The bats do not sleep for more than a few hours at once. Activity levels fluctuate throughout the day and higher activity levels are associated with higher ambient temperatures. This may be due to the bats undergoing torpor in order to conserve energy. Wind gusts frequently disturb their leaf roost and activity levels increase with increasing wind disturbance. Disruption of torpor by wind may be a disadvantage of roosting in leaves.

Max Glassburg '11, English

Mock Thesis: The Epic

I am writing a mock epic utilizing the Spenserian stanza, following in the footsteps of other poets, namely Lord Byron, who used this form for satirical purposes in narrative poetry. My tale follows three poets, Ezra Pound, Francesco Petrarca and Hank Williams as they encounter numerous "literary obstacles" and stretches of wilderness on their way to find and rescue Emily Dickinson, who has mysteriously disappeared from the mythical small community of dead poets. My goal is to advocate a concrete narrative structure in poetics that I think has been lost in the light of "experimental" poetic methods, attachments to "schools of thought" and various criticisms that, while serving a particular scholarly purpose, detract from the actual creation of poetry. The story is intended to be entertaining, as well, so those who are not interested in or familiar with literary criticism/tradition may enjoy themselves.

Queer Expressions: Telling Autobiographical Stories

I intend to screen a queer documentary of my own, presenting its influences on queer theory and its similarities with documentaries such as "It Wasn't Love" by Sadie Benning. I will situate the documentary within the queer culture, demonstrating its resistance to conventional gender and sexual roles. The autobiographical documentary will challenge a disciplinary heterosexual coherence, perpetuating non-normative sexual and gender identities. I will reject the binary frame of gender and rethink the human body and its definition. I will promote a unique symposium experience by presenting my art project, discussing it, celebrating the field of queer critical theory.

Baby Blue Tuesdays - Understanding Synesthesia

My presentation will be about synesthesia, the rare neurological condition that joins senses (e.g., a sound will evoke a color/smell/touch; letters and numbers have colors, etc.). I will explain how the different types of synesthesia work, the neurological theories about what causes it, how synesthesia appears to increase the memory and creativity of those with the condition, and the empirical evidence that supports the innate versus learned origin of this sensory phenomenon. I will draw examples from my own experience with synesthesia and do a simple test to see if there are people in the audience with grapheme-color synesthesia.

Cleo Hehn '13, Studio Art; Portland, OR

The Fallen Woman and the Fall of Society

In this presentation, I analyze Victorian attitudes toward women's sexuality, represented in five key paintings. While the women in Richard Redgrave's "The Outcast" (1851) and Augustus Egg's "Past and Present" (1858) must be cast out because of their sexual sins, the woman in William Holman Hunt's "The Awakening Conscience" (1853) repents and is redeemed. The women in Dante Gabriel Rossetti's "Found" (1853) and Ford Madox Brown's "Take Your Son, Sir" (1851), however, are not blamed for their sins. While most attributed the corruption and fall of society to these "fallen" women, the latter paintings reflect sympathy with their lives.

Paul Henne '11, English, Philosophy; Southbury, CT
Fictional Discourse and Fictitious Entities

It seems odd to suggest that the statement, “Hamlet is a prince of Denmark,” is false. Nonetheless, we know that *Hamlet* is a fictional play and that Hamlet is in no way an actual person. How can we make true statements about fictional entities? Are there such things as “fictional facts”? In this talk, I argue that cognitive statements about fictional entities refer—and are made true or false—in exactly the same way as cognitive statements about actual entities. This version of fictionalism requires that fictional entities have some sort of ontological status, a price I am prepared to pay.

Executive Power and the Courts

Presidential signing statements have been used by presidential administrations in the United States for well over a century. They have taken many forms and have greatly expanded the power of the executive branch of the national government. With any large expansion of the power of government, however, the question that immediately follows is this: What is the effect of signing statements on civil liberties? My thesis examines the relevant legal implications for the expansion of executive power through Presidential signing statements and, based on the makeup of our current legal system today, what protection the courts can offer for the protection of civil liberties.

From the Margin to Mainstream: Empowerment of Bolivian Indigenous Groups During the Government of Evo Morales

After taking office in 2006, Evo Morales, the first indigenous president of Bolivia, embarked on the challenge to empower the country’s historically marginalized native groups. In my symposium talk, I will present the findings of my senior thesis that evaluates the successes and shortcomings of Morales’s administration. More specifically, I will identify important economic, political, and sociocultural changes that have occurred in the situation of indigenous peoples over the past five years. Finally, I will take a brief look at the future of Bolivian native groups and present my policy suggestions for Morales’s next term.

Predictors and Moderators of English Language Learners’ Willingness to Speak English

In the U.S., immigrants are expected to learn English. At the same time, non-native accents are stigmatized. This discourages some immigrants from speaking English, which then hinders English acquisition. Why do some immigrants persist while others remain silent? Differences in willingness to speak English could be moderated by two personality variables: language self-efficacy (LSE) and implicit theories of the self (ITS). Hispanic immigrants and children of immigrants are the focus of this study. Those who report high levels of LSE and a malleable ITS are expected to be more willing to speak English, which could result in better English proficiency.

Lake Forest's Black History: A Glimpse into the Past

In the late 19th century, an African-American community established itself in Lake Forest on what is now south campus. Little is actually known about the particulars of this community, and my senior project is dedicated to gathering a strong foundation of knowledge of who these people were, what they did, and where they live now. I am working to memorialize the experiences and the impact of the community so that it does not fade from history. This presentation will focus on Samuel Dent, the Casselberry family, and the AME church that once was the center of Lake Forest's black history.

Retrieval of Context-Drug Memories Increases the Proportion of Recently Activated Neurons of the Hippocampus and Amygdala in Rats

Drug relapse is believed to be related to memories of the environment the drug was taken in. Whether blocking these memories can prevent relapse is unknown. The areas involved in the retrieval need to be found first. Rats were place conditioned with amphetamine and then re-exposed. At this time, measurements of recent activity using immunohistochemistry and laser scanning confocal microscopy were taken in the hippocampus and amygdala. A proportional increase is predicted in these areas but the analysis is still ongoing. If results yield what is expected, then blocking memory retrieval in these areas may decrease drug relapse. This project was conducted in Dr. David Rademacher's laboratory (Rosalind Franklin University of Medicine and Science).

African-American Influence in Lake Forest

This slideshow details the influence of African-Americans on the city of Lake Forest, IL. This brief history starts with Lake Forest being a site of the Underground Railroad. The history progresses into the state of African-Americans in Lake Forest today, including alumni and current students of Lake Forest College.

Evaluating the Genetic Link Between Autophagy and Parkinson's Disease in Yeasts

Parkinson's disease is an incurable neurodegenerative disease characterized by the death of midbrain dopaminergic neurons. The suspected cause of PD is the misfolding and aggregation of a protein α -synuclein. A popular hypothesis is that increasing degradation of α -synuclein may protect the cell from aggregation and toxicity. While strong pharmacological evidence indicates autophagy is involved in degradation of alpha-synuclein in PD, the genetic link remains unclear. I evaluated this genetic link for my senior thesis and my data so far shows that compromised autophagy in a budding yeast model results in altered localization and expression of α -synuclein, but does not significantly worsen toxicity.

Deciphering Parkinson's: Are Multiple Mutants Worse Than One?

Genetic mutations cause 10% of Parkinson's disease (PD) cases. The best-studied gene is alpha-synuclein and its three PD-causing mutations alter three different amino acids, which are the building blocks that

comprise the protein. Additionally, each mutant affects alpha-synuclein's properties in a distinct way indicating each building block's strategic importance. What we do not know is whether these three building blocks act independently or work together making the protein toxic to cells. My Richter research focused on evaluating the deleterious effects of combining these mutants in Fission and Budding Yeast, model organisms for Parkinson's disease developed in the DebBurman lab. The two yeast models allow me to analyze the changes in how alpha-synuclein localizes, accumulates and alters cell growth, in two organisms.

Nationalism in the Media: Perspectives of the 2010 BP Oil Spill in the US and UK media

The 2010 blowout in the Gulf of Mexico caused the worst environmental disaster the US has ever faced. Or did it? The American media would surely agree with the statement above, but the British media reported another side to this story. Although the US and UK media venues were covering the same events, they portrayed them from very different perspectives leaving the readers with an impression of the spill based on the respective media's sway. This presentation examines the US and UK nationalistic media bias by analyzing articles and images published in major media venues in the US and UK.

The So-Called Collapse of the Maya Civilization

This website is the final project for an independent study on the collapse of the Maya civilization and ongoing anthropological debates about the facts, possibilities, theoretical features, or characters of collapse in which the culture history of the classical Maya often plays a central role. In addition, this project draws parallels between classic Maya society and our own, providing the reader with insight to the significance of our society's decisions made during its defining moments. And what if our society was on its way to collapse? Could we stop it? And if not, what would we leave behind?

H/e/a/r/e

This play presents the similarity of people's experiences, thoughts, and emotions despite the differences of character, content and circumstance. Actors maintain a just-audible buzz throughout the play, over which main lines "pop out," sometimes singularly, sometimes in conjunction with others. This project was influenced by the idea of the rhizome, first proposed by Deleuze and Guattari—that from one point, there are so many possibilities and yet, together, all the points form one thing. It is singularity and multiplicity existing simultaneously. This play challenges audiences to see beyond people's differences and to see the humanity that lies somewhere underneath.

Islam and the State: Function Rather than Feature

Islam and politics are inextricably connected. Islam does not supersede state policies and interests; it sustains them. Throughout its history, Islam has served as a functional component of the state in legitimating rulers and the consolidation of power, encouraging and justifying expansion and disguising secular, modernizing reforms. Additionally, especially in Arab states, the many pre-Islamic cultural elements reflected in Islamic traditions also fill similar roles. With the advent of the modern nation

state, Islam serves the functions listed above, as well as providing a national and regional identity. While the religious component remains a *raison d'etat* of the pragmatic and rational state, it does not represent an essential character and *raison d'etre*. For this reason, the Islamic state, and the greater Middle East in general, should be viewed as a rational actor in the same vein as its Western counterparts.

Howard Van Doren Shaw's Ragdale: Preserving American Arts and Crafts

The summer home of architect Howard Van Doren Shaw embodies the arts and crafts ideals of John Ruskin and William Morris. During the rapid urbanization and industrialization of the late 19th century, Shaw built an idyllic country estate for his family away from the filth and squalor of Chicago. The utilitarian yet fanciful space was an inspiration for creative endeavors of three generations of Shaws. Preservation of post-Shaw Ragdale involves many groups; the goal is to strike a balance between the legacy of the Shaw family, retaining historic significance, and serving the residents and community members.

Sports and Academics: The Effects of Delayed Gratification

This research looks into a common stereotype suggesting that athletes obtain worse grades than non-athletes and offers a suggestion as to why athletes' grades may not be up to par. Typical athletes have been culturally conditioned to seek instant gratifications (such as winning a game, running the fastest time, or having fun with teammates) that the classroom seems to not offer them. The results of my research imply that reward structures figure prominently into the relative discipline and drive of student-athletes and are worth examining in relation to the academic success of athletes.

Who is Don Draper?: Masculinity, Television and "Mad Men"

For almost 20 years, scholars and social critics have written of a "crisis in masculinity." What precipitated this supposed crisis? Where can this crisis be found in modern culture? This presentation explores these questions through a study of masculinity in the AMC television series *Mad Men*. Furthermore, it asserts that *Mad Men* actively debunks the male ideal by depicting masculine identity crisis as central to, and as an inevitable eventuality of, its attempted performance.

Love or Money: Who Owns Falmouth, Jamaica?

Falmouth, Jamaica was founded as a booming port town importing iron, food and slaves and exporting sugar and dyes supplied by vast plantations owned by British colonial families. After emancipation the port activity slowed and eventually ceased and the town was in many ways frozen in time. In 2011 a newly-dredged cruise ship port is to open in Falmouth, and once again the town will welcome large vessels. This paper examines the impact of the port on the town of Falmouth and the power structures that define the relationships of those vested interests in Falmouth.

Examination of Substitution Effects on Specific Sonogashira Coupling Reactions

The Sonogashira reaction is an important Palladium catalyzed coupling reaction used extensively in modern chemical synthesis. In this study ethynylamines are coupled with an aromatic system containing a nitrogen substituent. However, this coupling becomes problematic with nitrogen substituents placed in various positions in the reactant molecules. This study involves varying the type of aromatic nitrogen substituents and selecting various blocking groups for use with the ethynylamines; along with these substituent variations many other reaction parameters have to be examined for reaction optimization. Some success has already been achieved toward understanding the complex nature of this important coupling reaction.

Investigating the Role of the Androgenic Hormone Testosterone on Risk-Taking Behavior in Sprague-Dawley Rats

Testosterone plays a critical role in the development of gender and gender-specific traits. Whereas the physiological effects of testosterone are well established, the hormone's influence on higher-order functions such as cognition and behavior are poorly understood. Recent evidence suggests that testosterone increases sensation seeking, aggression, and mate-seeking behavior: behaviors with a risk component. More recent findings suggest a strong link between testosterone and financial risk-taking behavior. However, the causal relationship between testosterone and risk-taking behavior has yet to be determined. Here we hypothesize that short-term treatment with testosterone in Sprague Dawley rats increases the probability of risk-taking behavior.

Does Aromatherapy Affect Brain Waves & Reaction Time?

Do smells affect how we feel? Could aromas even impact our brain waves and working memory? In this experiment subjects were asked to perform 3 visual-choice reaction-time tests differing in difficulty in a room filled with the relaxing scent of lavender, the energizing scent of citrus, or no aroma. Brain waves and reaction time were compared for each condition. When results were analyzed no clear difference was observed in the brain waves in relation to the different odors. However, we did find a trend of slower average reaction times in the aroma conditions compared to the control (no aroma) condition. Lastly, when comparing the difficulty of the reaction time tests we found that as the difficulty increased, more theta (or thinking) waves were observed.

Discounting and Utility: Systematic Changes in Willingness to Pay as a Response to Changes in Price

This paper examines how consumers may base the valuation of a commodity (at least in part) on the price of the good. Formally, this is represented by making the willingness to pay (WTP) for a good a function of its price. This paper adds to conventional economic theory by explaining why consumers may alter their valuations in response to price changes, particularly in circumstances when the price of a good changes and the consumer is aware of the price change (for example, retail discounts). The paper develops three models to explain the consumer's valuation of a good: updating, anchoring, and savings utility, and represents them formally and details how changes in the price and the preferences of the consumer (such as desire to save money, and perceived correlation between price and quality) will affect the valuation of potential purchases, and hence the decision about whether or not to buy. To test which models most accurately represent consumer behavior, I ran a classroom experiment to test the validity of each. In addition to experimental data, this paper also analyzes store-level market data to

understand how consumers decide to make purchases. Overall, this paper will help to explain patterns of consumer behavior that would be considered anomalous by traditional theory.

Informal and Formal Microfinance Activities in India

With more than 3 billion people living on \$2 or less a day, financial services are vital to eradicate poverty. In most developing economies, banks and financial services are not available to the poor. As a result, an array of informal and formal microloan sources has surfaced to address concerns of poverty. In India, these include self-help groups (SHGs), rotating savings and credit association (RoSCAs), accumulating savings and credit associations (ASCAs), village savings and loan associations (VSLAs), credit unions and other credit cooperatives, NGO microfinance programs, and for-profit microfinance institutions.

Biogenesis of Non-Canonical MicroRNAs

MicroRNAs (miRNAs) play an important role in the regulation of gene expression. Canonical miRNAs are transcribed and then cleaved by the microprocessor complex into pre-miRNA. In some cases, splicing, rather than the microprocessor, generates a pre-miRNA. These microRNAs are known as mirtrons. To study the biogenesis, we expressed mirtrons in HEK-293T cells and analyzed splicing and miRNA abundance by reverse transcription PCR. We found that mirtron-1228 located within host gene LRP1 is neither splicing nor microprocessor dependent. These results suggest that a novel miRNA biogenesis pathway is involved in processing a subset of miRNAs.

A Novel Telomere-Anchored PCR Approach to Measure Telomeres

Telomeres serve as the protective caps of linear chromosomes. Telomere length is often greater in germ cells than somatic cells of the same organism; however, little is known about germ cell telomere lengths in many organisms. In our lab we used the filamentous fungus, *Aspergillus nidulans*, to design an assay that would allow us to make accurate measurements of the telomeres in the relatively sparse meiotic cells. Our results indicate that the telomere lengths of germ cells are similar to somatic cells. These results indicate a very strict regulation of telomere length in this organism.

Asian Americans and Affirmative Action: The Need for a Reevaluation of Affirmative Action Policies

This paper addresses the negative consequences of affirmative-action policies, largely focusing on the Asian-American community. Through most current affirmative-action policies, Asian Americans are viewed as a single, monolithic racial group. This determination glosses over the different economic and social cultures faced by different ethnicities within the Asian-American community. The paper concludes that affirmative-action policies need to address the various ethnicities within the racial designation of 'Asian American', and expands this argument to other broad racial categories such as Black, White, and Hispanic.

Genetic Support for Endocytosis as Degradation Route for Alpha-Synuclein, the Parkinson's Disease Protein

Parkinson's disease is an incurable and neurodegenerative disease linked to the accumulation of α -synuclein protein. The impaired degradation of α -synuclein is thought to promote its aggregation and cell death. Therefore, accelerating the degradation of α -synuclein is of therapeutic interest. We hypothesized that lysosome is a degradation site for α -synuclein and the route to endocytosis. Specifically, we evaluated if three disease-related properties (subcellular localization, accumulation and cellular toxicity) of α -synuclein changed in yeast strains when genes were eliminated that encode for seventeen proteins that control the endocytosis pathway. Our data suggested that most gene deletions altered at least one of the above properties related to pathology of α -synuclein. Therefore, in both wildtype and familial mutant E46K α -synuclein is degraded by the lysosome via the endocytosis route.

The Development of Civil Society in Post-Communist Romania

Political theorists have always considered civil society to be a strong indicator for democracy and a positive political development. Civil society constitutes the ground for socio-political movements and political revolutions; it helps bring about changes and it is the guardian of individual rights and liberties. My thesis explores the development of civil society in the two decades following the Revolution of '89 in Romania. It attempts to put forward a comprehensive historical, socio-anthropological and political explanation for why concepts of civil society and civil responsibility remain underdeveloped in the political conscience of the populace and what needs to change in order for Romanian civil society to be able to fully absorb and institutionalize a liberal, democratic attitude.

Parkinson's Disease-Associated Post-Translational Modification Analysis of the Protein A-Synuclein

Parkinson's disease is an incurable neurodegenerative disease affecting nearly 4 million people worldwide. The disease is linked to three properties of the protein α -synuclein: misfolding and aggregation, lipid interactions, and cellular toxicity. Knowledge about how basic cellular modifications can alter these three properties could help provide therapeutic approaches to this deadly disease. We evaluated changes in aggregation, toxicity, or accumulation by testing α -synuclein mutants that block or mimic phosphorylation and nitration. Our data suggests that the inhibition of phosphorylation increased both toxicity and cytoplasmic localization of α -synuclein. Additionally, depending on key amino acids, mimicking nitration increased cytoplasmic localization. Interestingly, both the inhibition and mimicry of nitration caused toxicity in specific situations.

China's Soft Power in Latin America: Implications for the Western Hemisphere

The thesis analyzes the history and ongoing transformations in Sino-US-Latin American relations. Its central focus is China's increasing use of 'soft power' in Latin America and the implications of China's growing influence in Latin America on the region's geopolitics. The thesis considers two hypothetical outcomes of this triangular relationship. The first says relations going forward will be based on a new dependency model in which commercial exchanges result in China supplanting the United States as the region's dominant economic actor. The other expects a "win-win-win" framework of international trade, cooperation and development in which China, the U.S., and the countries of Latin America benefit. The thesis considers the implications of each scenario on the United States 'soft power' in Latin America.

What's Wrong With Torture?

There is wide agreement that there is something especially wrong with torture. U.S. and international law prohibit it. Images of it disturb us. But this special objectionableness requires examination. I argue that torture is a distinctive kind of immoral act, characterized by a continual, inescapable threat of essential pain. This continual threat of essential pain gives the torturer a pseudo-omnipotence that no human being ought to be able to wield. Through an exploration of the phenomenology of torture, and by comparing torture with the lesser but related evil of blackmail, I hope to illuminate the especially disquieting nature of torture.

Web-based Pictorial Guide for the Ants of Illinois

The correct identification of organisms is a critical component of biology. The most commonly used tool for identification of an unknown specimen is a dichotomous key. Dichotomous means divided into two parts. Therefore, a dichotomous key begins by presenting two general options. Each subsequent step leads to pairs of more specific characteristics, ultimately leading to the identification of the specimen. However, dichotomous keys are often difficult to use and are predominately written with specific scientific jargon. For experts in the field, this is not an issue, but for those who are beginning, it is a tedious and difficult experience. My goal is to create a website that presents a user-friendly, pictorial-based dichotomous key of the ant genera of Illinois.

Can Isolated Rats Read Social Cues?

Social transmission, or the transfer of information from one conspecific to another, is thought to enhance response to environmental challenges. Such transfer of information has been noted in several species. In the summer of 2010 at Rosalind Franklin University, I was able to confirm that social transmission occurs in Sprague-Dawley rats. In my ongoing thesis research I have designed an experiment to determine if rats isolated after weaning will continue to exhibit social transmission. Specifically, I am testing the prediction that isolated rats will not receive information easily due to a deficit in being able to register social cues.

Development of a New Method for Measurement of Hazardous Pollutants in Air

Hazardous Air Pollutants (HAPs) are toxic chemicals, whose emissions are regulated by the EPA. Monitoring of HAP concentrations is useful in tracing air pollution, but methods used by national labs tend to be complex and expensive. In this study, polymer-coated fibers were used to selectively trap volatile chemicals from the air before laboratory analysis. Several sampling variables were optimized: extraction time, air velocity and temperature. Optimized sampling allowed us to achieve sensitivity comparable to the more complex equipment. This novel technique is simple enough to be used as a field laboratory component of undergraduate chemistry and environmental studies courses.

Explaining Game-to-Game Ticket Sales for Major League Baseball Games Over Time

We collected data on more than 10,000 Major League Baseball games from 1985 through 2009 in order to estimate the effect various factors have had on attendance at games over time. Interleague and interleague rivalry contests are associated with higher attendances, but this relationship has been weakening over time. Contrary to some of the previous literature, we find that the likelihood the home team will win is inconsistently estimated over time, lending little support for the uncertainty of outcome hypothesis. This is consistent with the contention that teams have become more adept at using linear pricing schemes when selling tickets.

Translating "Women of the Twilight": Reading and Discussion

In Fall 2008, students in Cynthia Hahn's FREN317: Creative Writing and Translation, collaborated with Lebanese author, Evelyne Accad, on the translation of her volume of short stories. This work has resulted in the publication of a bilingual edition of the text, reworked by Cynthia Hahn, as "Femmes du crépuscule/Women of the Twilight" (Paris: Alfabarre, 2011). For their translations, students wrestled with issues of cultural context, verb tense, connotations, language register, consistency of narrative voice, word choice and other translation questions. For this session, three students will read their short story translation and discuss the translation experience: Jeanne Engelkemeir ("Air Hostess: You and Me"), Emma Jo Chalverus ("A Woman Who Wants to Live"), and Fabricio Sordoni ("Sacrificial Woman").

Stamen Tintikov

The Society of Physics Students, through interactive and fun demonstration will present some interesting facts about light and waves. In this panel, we will show you how we can stop motion by using strobe light. Demonstration of holograms will show the beauty of this technique and how objects can be recorded and reconstructed. Also, with the help of different optical instruments, such as mirrors, different types of lenses, polarizes and of course lasers, we will create spectacular light demonstrations.

Flames, Fumes and Flashes: Students Fired Up About Chemistry

The members of the Lake Forest College Student Affiliates of the American Chemical Society (SAACS) have been nationally recognized as an award-winning chapter because of their continuing commitment to and involvement in the community. SAACS will demonstrate central chemical principles through a series of attention-grabbing experiments, including freezing roses with liquid nitrogen, explosive hydrogen balloons, and a colorful ammonia fountain.

Raising Awareness One Bare Foot at a Time: TOMS One Day Without Shoes

If you could change the lives of children with a simple gesture, would you do for one day what millions do every day? On April 5th 2011, people around the world will voluntarily go without shoes to raise awareness for the millions of children in developing countries without shoes daily. We will explore the need for shoes in these developing countries, the TOMS One-for-One vision, and the process behind forming a not-for-profit organization and popularizing a movement such as TOMS Day Without Shoes. Join us to discover why participants are choosing to go without shoes.

Dreamweaver, Sing: Celebrating the Marriage of Music and Text

This performance event is a collaboration among three graduating seniors from Lake Forest College, whose various artistic mediums include photography, composition, creative writing, choral conducting, dance, and theater. The event will feature individual contributions from each artist as well as a world-premiere performance of "Dreamweaver," a new choral work with music by Emily Hilgenberg, text by Karen Larson, and performed by the Lake Forest College Mixed Metaphors, under the direction of Mariana Garciagodoy. The theme of the event is the marriage of text and music, and the inspiration that arises from that union.

Community Interaction in North Chicago

Many students are now participating in service-learning activities, which have led to exciting interactions in nearby communities. The College's connections with the North Chicago Community Partners and the I Have a Dream group have led to a wide range of opportunities with schools in North Chicago. Four Lake Forest College students will describe their experiences with North Chicago students: (1) Gina Ambrose (2014) will discuss her efforts in FIYS 106, as the class developed a presentation on how the

brain works for middle school students; (2) Samantha Herron (2011) will speak about her participation in the tutoring program through Rel 318, which led to an internship with North Chicago Community Partners; (3) Nicole Moore (2011) and Farzeen Tariq (2013) will relate their efforts in EthC 276, in which students discussed King's "Letter from Birmingham Jail" with I Have a Dream high school students.

Does the Convenience of Accessibility to Water Sources Affect Water Drinking Behavior?

Can water convenience have a significant effect on people's drinking behavior? Participants (N=38) were recruited through convenience sampling and randomly assigned into two water source conditions: near (water placed on the table) or far (water placed down the hall). After ten minutes of exercise, participants learned the location of the water source and were asked to complete a survey. The amount of water each participant drank was measured. A significant difference was found between the amount of water drank by participants in the near and far conditions. This result might have further implications for people's motivation to drink water.

Portfolios of the Poor: Macro and Micro Empowerment of Women

A majority of people around the world struggle to survive on \$2 a day. To adapt to that setting, a variety of informal and formal microfinance tools are used. Local savings clubs, family loans, rotating savings and credit associations (RoSCAs), micro loans, microinsurance, and others provide household financial security, especially for women. These actions are often in contrast to failed international aid programs.

Aikido

In this presentation, we will demonstrate techniques used for self-defense from Aikido, a Japanese martial art that teaches how to create peaceful resolutions by redirecting an opponent's energy to gain control of a situation. Through a series of joint locks, pins, and throws, as well as practice with jo (a four-foot staff) and bokken (a wooden, practice sword), students learn to protect themselves, and they also learn the peaceful philosophy behind the martial art. Morehei Ueshiba once said, "To control aggression without inflicting injury is the art of peace." This is the philosophy we learn at the LFC Aikido Club.
